
LEADING THE WAY IN WORKPLACE EXPOSURE COMPLIANCE

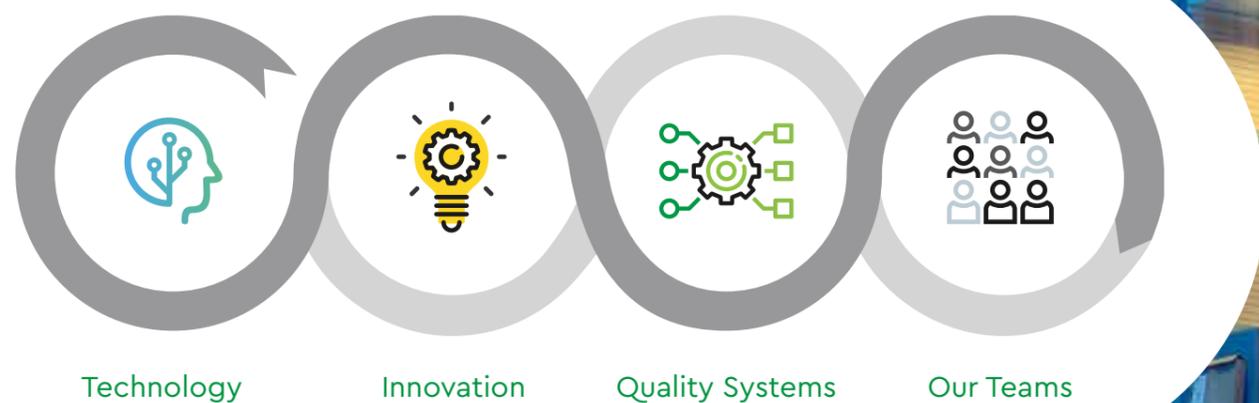

EURO
ENVIRONMENTAL
COMPLIANCE, PROTECTION, PEACE OF MIND

Highly skilled and qualified compliance team at the forefront of innovation

At Euro Environmental we continually invest in new technology, quality systems and our team. We believe in a pro-active approach to guarantee sustainable growth, and we look forward to maintaining our position as a market leader within our field.

As a company, Euro Environmental aim to continue listening to our clients and provide flexible solutions tailored to the organisation's individual needs. Euro Environmental always strives to improve the standard of the services we offer. This is reflected within the company's UKAS & ISO accredited quality systems, industry approvals and the approach taken to each project.

Providing both consultancy and house laboratory-based services, you can rest assured that our dedicated team have the necessary industry knowledge to see the project through to successful completion, whatever the requirement.

Our mission, vision and values are at the core of our business

Our mission

To provide simple solutions to ensure our clients, and their respective workforces, are protected from exposure to hazards using the latest exposure safety technology innovations. Our mission is to significantly improve worker safety by increasing client awareness of these exposure hazards and providing straightforward advice on mitigating the risk. The key to our successful growth will be achieved through a dedicated focus towards giving excellent customer service.

Our vision

To ensure that every worker is safe from hazard exposure, achieved via the delivery of simple but innovative workplace exposure management solutions.

Our values

Our values are based around 4 simple pillars and we live by these daily; innovation, customer service excellence, integrity and simplicity.

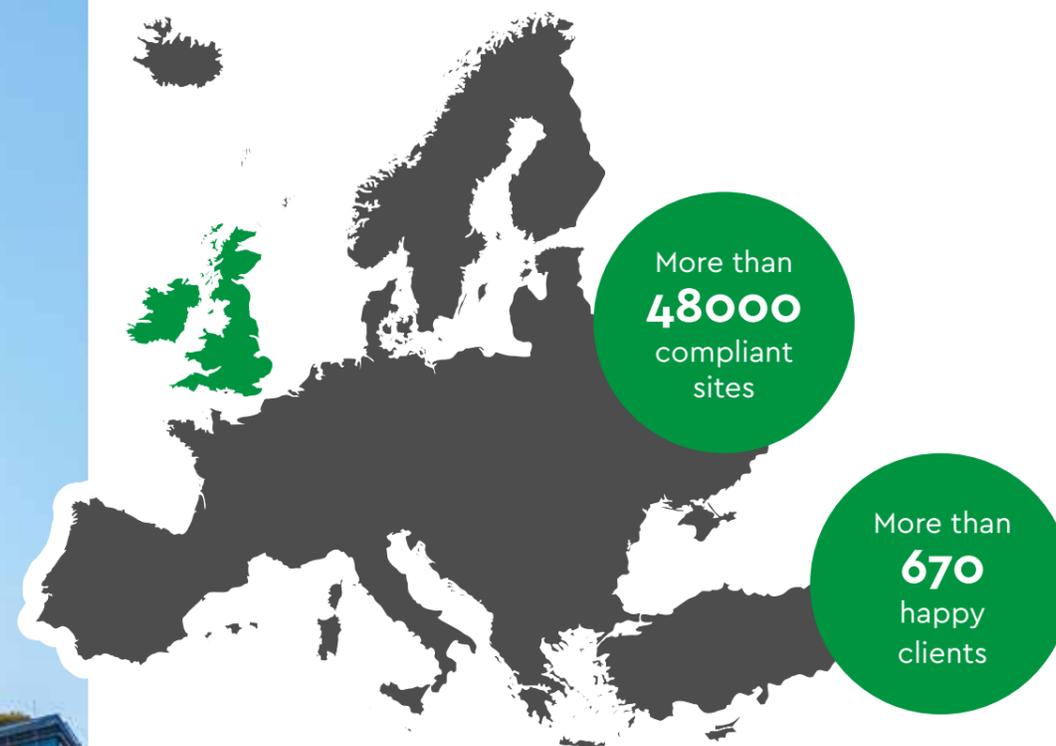

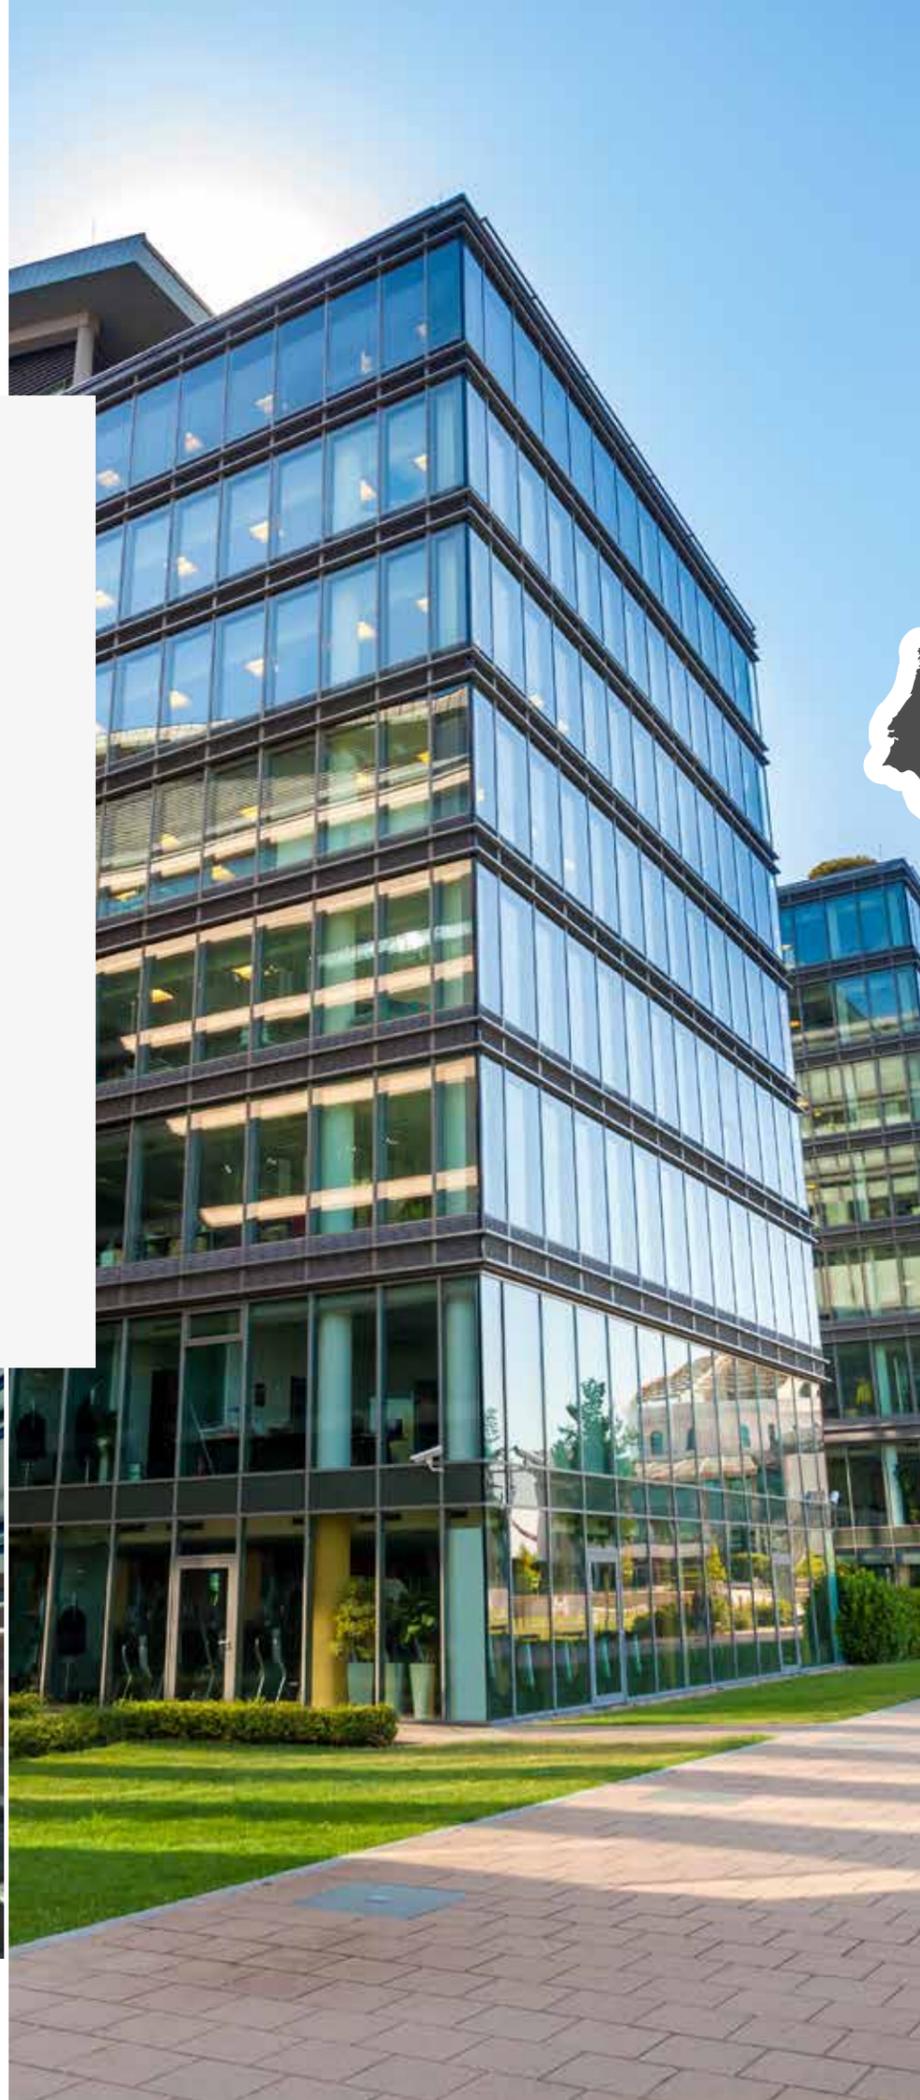

Excellent customer service is the number one job in our company

Your teams experience and attention to detail in relation to the safe and complete removal of asbestos materials during the P21 scheme for the United Lincolnshire Hospital NHS contract was invaluable. I would like to thank you on behalf of the whole team and look forward to working with you on the next scheme.

Kevin Taylor – Construction Manager
Kier

Serving customers throughout the UK and Europe since 1998

Our customer base is at the heart of everything we do, and our knowledge is evident in our outcomes and advice. We are proud to support customers in diverse sectors, ranging from industrial manufacturing, warehousing, construction, facilities management, and transportation.

We take the stress out of workplace compliance, legislation and duty of care concerns. So our service is comprehensive, and your supply chain is simple. In addition, we provide training to ensure you have an up to date knowledge base in house.

Reducing the risk of occupational exposure

Workplace exposure

Every year thousands of workers are made ill in the workplace by hazardous substances exposure, contracting lung disease such as asthma, cancer and COPD. As an employer, you are responsible for taking effective measures to assess and control exposure to hazardous substances and protect employee health.

Under the Control of Substances Hazardous to Health (COSHH) regulations, employers are required to protect employees as well as any others who may be exposed to hazardous substances by ensuring that a monitoring regime is in place to ensure their safety.

We have the in-house expertise to carry out assessments of a vast range of occupational exposure risks such as fumes, dust, bio hazards and vapours as well as assessing other hazards such as noise and vibration.

Our COSHH and workplace exposure assessments

Biological

Airborne biological hazards are common contaminants within indoor environments. We use the latest technology to perform sampling and testing for a range of biological agents, we also provide advice in relation to likely exposure.

Dust, Mists & Fumes

Dusts, fumes and mists can be produced by a vast range of working processes and require specialist sampling and analysis techniques to measure exposure levels in relation to the legal exposure limits.

Chemicals & Solvents

Volatile chemicals are used commonly in industrial processes, and where legal limits are defined, exposure monitoring strategies should be implemented. We specialise in measuring exposure to these hazardous substances.

Noise & Vibration

The regulations place a duty on employers to assess exposure to noise/vibration. We can work with you to make an assessment of the risk and provide advice to ensure you are compliant.

Our indoor air quality services

Building Certification IAQ

The effects of VOC's and other indoor air pollutants on human health are well documented. Despite being able to decay naturally, they can persist in the environment for a long time.

IAQ Assessments

Poor air quality within the indoor environment can result in occupants experiencing a number of symptoms ranging from fatigue to shortness of breath.

Odour Investigation

Odours within indoor environments can be unpleasant or potentially harmful. Odours that are generated from unknown sources can be particularly problematic.

making your indoor work spaces safe

Is indoor air quality an issue within your workplace?

Indoor Air Quality Services

Indoor air quality has been identified as one of the top five most urgent environmental risks to public health, and as a responsible employer – you need to ensure your employees are safe and healthy whilst in the working environment.

Symptoms related to poor workplace air quality vary depending on the type of contaminant. They can easily be mistaken for symptoms of other illnesses such as allergies, stress, colds and influenza.

We have the in-house expertise to carryout assessments of a range of common contaminants and provide ongoing advice and monitoring of air quality within your workplace.

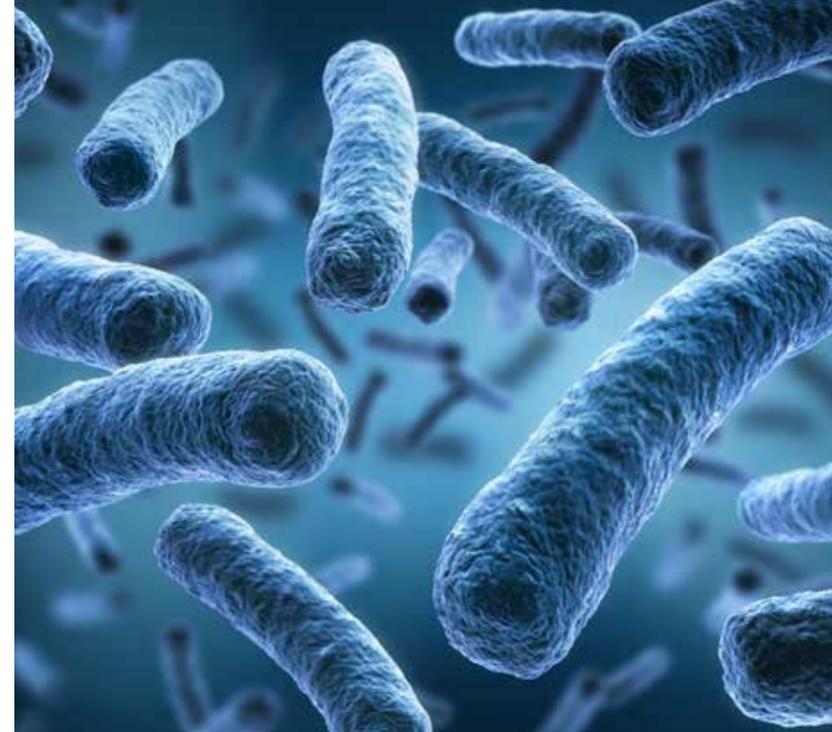

Identifying the risk within your workplace

Hazard surveys

Every year thousands of workers are made ill in the workplace by hazardous substance exposure, contracting lung diseases such as asthma, legionnaires disease, asbestosis and COPD. As an employer, you are responsible for taking effective measures to assess and control exposure to hazardous substances and protect employee health.

We have the in-house expertise to carryout a range of hazard surveys that will ensure your organisation meets the relevant HSE guidance and regulations.

Our range of hazard surveys

comply with the latest HSE guidance

Asbestos Surveys & Testing

A key foundation of any asbestos management plan is the asbestos survey, the information gathered at the survey stage will determine how the ongoing risk is managed.

Covid-19 Hygiene Services

To assist our clients in managing the workplace risk associated with the COVID-19 pandemic we have developed a range of testing and auditing services to provide reassurance and support.

Legionella Risk Management

Employers are required to control the risk of exposure to legionella bacteria by ensuring they follow the approved code of practice L8.

Toxic Mould Surveys

The most toxic moulds are those that are capable of producing chemicals called mycotoxins. Our surveys can identify the presence of these mould species and determine if they are present at levels that may cause harm to health.
